Clinical Psychology Case Studies (9990 Syllabus 2026)

1. Schizophrenia

- **Rosenhan (1973)** – *"On being sane in insane places"*
  - Classic study on psychiatric diagnosis and institutionalization.
  - Highlights issues of reliability and validity in mental health diagnosis.

2. Depression

- **Beck (1979)** – Cognitive theory of depression.
  - Focuses on negative schemas and cognitive distortions.
  - Forms the basis of cognitive therapy.

3. Anxiety Disorders

- **Chapman & DeLapp (2013)** – Case study of blood-injection-injury phobia.
  - Demonstrates CBT with applied tension techniques.
  - Shows how structured therapy reduces avoidance and fainting responses.

4. Obsessive-Compulsive Disorder (OCD)

- **Lovett et al. (2006)** – Case study on OCD treatment.
  - Explores behavioral and cognitive interventions.
  - Highlights mechanisms of change in therapy.

5. Eating Disorders

- **Fairburn et al. (1993)** – Cognitive-behavioral treatment of bulimia nervosa.

    - Examines the effectiveness of CBT in reducing binge-purge cycles.
    - Emphasizes the role of distorted thinking patterns.

📊 Overview Table

Disorder Type	Case Study & Year	Key Focus
Schizophrenia	Rosenhan (1973)	Reliability of diagnosis
Depression	Beck (1979)	Cognitive theory & therapy
Anxiety (BII Phobia)	Chapman & DeLapp (2013)	CBT + applied tension
OCD	Lovett et al. (2006)	Behavioral & cognitive treatment
Eating Disorders	Fairburn et al. (1993)	CBT for bulimia

⚠️ Key Notes for Exam Preparation

- **Clinical Psychology section** requires understanding of *both disorders and treatments*.
- Students must be able to:
    - Describe the case studies.
    - Evaluate their strengths/weaknesses (validity, ethics, generalizability).
    - Apply them to broader psychological theories.
- **Exam Tip**: Link each case study to *real-world applications* (e.g., CBT in hospitals, diagnostic reliability in psychiatry).

✅ In summary: For the **Clinical Psychology option in the 9990 syllabus (2026)**, you'll need to cover **Rosenhan (1973), Beck (1979), Chapman & DeLapp (2013), Lovett et al. (2006), and Fairburn et al. (1993)**. These span schizophrenia, depression, anxiety disorders, OCD, and eating disorders, giving a comprehensive view of clinical approaches.
